EDUCATION

BSc Computer Science (Specialization) | *University of Alberta*

Sep 2023 – Aug 2027

Relevant Courses: Algorithms & Data Structures, ML I, RL, AI Search & Planning, Software Eng., Software Process & Product Mgmt., Software Quality, Databases, Operating Systems, Ops Mgmt., Linear Algebra I–II, Statistics I–II

EXPERIENCE

TechOps & Support Intern

May 2026 – Present

CIBC

Toronto, ON

- Developing and supporting enterprise scheduling platforms used in critical banking workflows, **improving reliability** through **automation and system enhancements**.
- Troubleshooting production issues across **distributed systems** while collaborating with **engineering and business teams** to maintain service availability.

Software Developer Intern

Jan 2026 – Apr 2026

MuchLearning (KtoInfinity)

Edmonton, AB

- Built **FastAPI microservices** for high-throughput production data pipelines in **Agile team environments**.
- Designed **scalable, fault-tolerant REST APIs**, improving system reliability & automated decision workflows.

UR2PhD Research Scholar

Sep 2025 – Dec 2025

Department of Computing Science, University of Alberta

Edmonton, AB

- Designed **scalable experimentation pipelines**, evaluating performance, scalability, and failure modes.
- Engineered **Python/C++ benchmarking tools** measuring **latency, throughput, and reliability** at scale.

Full Stack Developer Intern

Aug 2025 – Dec 2025

Daylily AI (Daylily Software Inc.)*

Remote

- Constructed **React + FastAPI** systems integrating AI-powered features into **production user workflows**.
- Designed REST APIs, implemented **frontend components**, and deployed features through the complete **SDLC**.

Research Intern

May 2025 – Jul 2025

School of Mathematics and Computer Science, Indian Institute of Technology Goa (IIT Goa)

Goa, India

- Developed **3+ data-driven control algorithms** for flow battery management, reducing energy loss by **25%**.
- Contributed to research on **programmable flow systems**, targeting future **IEEE publication**.

Teaching Assistant

Jan 2025 – Apr 2026

Department of Computing Science, University of Alberta

Edmonton, AB

- Graded **700+ assignments** and led **35 labs**, communicating complex technical concepts to diverse students.
- Reduced grading turnaround from **4 to 1.5 days** using Python automation scripts, **improving efficiency**.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, C, HTML/CSS, R, Bash, Powershell

Frameworks: React, React Native, Node.js, Express, Flask, FastAPI, Docker, Azure, Jira, Git, Confluence

Systems & Analysis: Linux/Unix, microservices, REST APIs, SDLC, application support, cloud infrastructure

Data & Analytics: Exploratory data analysis, data pipelines, data validation, data visualization (Matplotlib, Power BI)

Testing/QA: Automated testing (unit, integration, regression), CI/CD, reliability testing, process documentation, OOP

PROJECTS

Information Disclosure and Intraday Liquidity Risk | *Python (NumPy, Matplotlib)*

Dec 2025

- Co-authored a **tech blog** analyzing how intraday liquidity disclosure **impacts risk** during payment disruptions.
- Built **computational simulations** analyzing intraday liquidity risk across transaction workloads.

Signal Vault | *Python, JavaScript, HTML/CSS, Node.js*

May 2025 – Nov 2025

- Developed an **offline-first search system** supporting emergency access for **100+ terms** during outages.
- Achieved 90% faster search response through measured performance optimization using localStorage caching.

Bias Visualizer Chrome Extension | *JavaScript, HTML/CSS, FastAPI, Python*

May 2025

- Built Chrome extension to compare **30+ trending terms** across Google Trends and Reddit.
- Implemented a **FastAPI backend** for real-time text analysis, sustaining **500+ queries/second** with low latency.

ACHIEVEMENTS

2026 UR2PhD Undergraduate Mentoring Workshop & Research Showcase

New Orleans, LA

- Selected to present research on **deduplication software systems and content-defined chunking** techniques.

natIgnite Hackathon - 1st Place, \$6,000 in seed funding

Network for Applied Technology (NAT)

- Built **TrustLine**, a real-time AI-based **scam and fraud call detector** using React Native and FastAPI.

DevCon Hackathon - 2nd Place, \$1,000 cash prize

Edmonton Unlimited

- Built **RideSafe**, a real-time transit safety app with **ViT-based threat detection** using React Native & Flask.
